

The ethics of research involving human participants: an introduction

Online training to enhance your research

**3-4
hours**

What it's about

This course provides a solid grounding in research ethics, equipping you to recognise and manage ethical challenges, prepare for ethics review processes, and embed ethical thinking into every stage of your research. It's designed to be practical and widely applicable, whatever your discipline or career stage.

What you'll learn

- The core principles of research ethics in studies involving human participants
- The role of research governance and how to manage ethics review processes
- How to embed ethics into every stage of your research – from design to dissemination
- The importance of informed consent and participant communication and strategies for maintaining researcher safety
