

Software Engineering MSci (Hons)

UCAS Code: SE16 | **Duration: 4 years** | **Full-time** | **Hope Park** | **2024/2025**

Placement year opportunities available | Study Abroad opportunities

Course Overview

Modern society could not function without large software systems. National utilities and infrastructure, energy, communications, health, business and transport all rely on complex and large applications.

With the increasing complexity of these software systems comes an increasing difficulty in building and delivering a correct, and robust, solution to customers on time and on budget. Such software cannot be produced successfully, safely and efficiently without following some constraining, and managing, process. This is the domain of the software engineer.

Entry Requirements

This course follows the standard University entry requirements. Please see the website for further information.

Fees and Additional Costs

The tuition fees for 2024/2025 are £9,250 for full-time undergraduate courses.

If you are a student from the Isle of Man or the Channel Islands, your tuition fees will also be £9,250. The University reserves the right to increase Home and EU Undergraduate and PGCE tuition fees in line with any inflationary or other increase authorised by the Secretary of State for future years of study.

You will also need to consider the cost of your accommodation each year whilst you study at university.

Visit our accommodation webpages for further details about our Halls of Residence:

Software Engineering MSci (Hons) Curriculum

Year One

The first year provides a broad introduction to foundational computer science concepts across theoretical knowledge, problem solving, and practical skills. Topics you will study include:

- Professional Skills to prepare for computer science learning and expectations.
- Structured Problem Solving methodologies, with a focus on Python programming.
- Database Technology fundamentals, from theory to practice.
- Python Programming principles and practical application.
- Website Development basics.
- Computer Systems foundations.

Year Two

This year will see a focus on specialized areas within the discipline, with each topic explored in detail. You will study:

- Object-oriented Programming with C++
- Professional Skills
- Software Engineering
- Website Development
- Algorithm Analysis and Design
- Networks
- Human-computer Interaction
- Graphics with C++

Year Three

This year, the largest project will be your dissertation, but you'll study additional topics that go deep into the intricacies of the discipline, ensuring a holistic understanding of both its theoretical underpinnings and practical applications.

- Web Innovations
- IoT and Mobile Development
- Advanced Database
- Software Management
- Software Architecture
- Cloud Computing

Year Four

In year four you will look at modern paradigms for enterprise level software development, deployment, monitoring and maintenance. You will study:

- Computing in the cloud
- Solutions architectures focussing on microservice architectures
- Enterprise integration patterns
- Virtualization
- Software containerization and orchestration
- DevOps and monitoring in the cloud
- Hybrid cloud architectures
- Continuous integration and continuous delivery

You will undertake a significant project and produce an associated dissertation.

COURSE STRUCTURE

Teaching on this degree is structured into lectures, where all students are taught together, seminars of smaller groups of around 15-20 students, and tutorials which typically have no more than 10 students. During your first year of study, there are approximately 12 teaching hours each week, which reduces to approximately 10 teaching hours in your second and third years. On top of teaching hours, you are also expected to spend a number of hours studying independently each week, as well as studying in groups to prepare for any group assessments that you may have.

ASSESSMENT AND FEEDBACK

During your degree, there are a variety of assessment types to ensure you are given a range of opportunities to demonstrate your knowledge, skills and understanding of the academic and professional components of the degree. These include written exams, portfolios of tasks and activities, and practical coursework. In your final year, there is also a dissertation or extended research project to complete. You will be given written feedback on your assessments, and you will have the opportunity to discuss this with your tutor in more detail.
